Dear Mr. Fabris

I regard to your article on Page 100 of Vol 5 No. 6 Title Page Instructions. I have found an easier way to center instruction on the screen for the Title Page.

I tried your method and found like you said that it interferes with preset variables.

What I did was research into some previous expereience with a typewriter.

Since each character is 5 pixel + 1 wide I took the number of spaces I needed centered and multipled by 6 and the divided by 2. This gave me a perfectly centered line, with a lot less trouble and programing.

For example: Lazer Blazer

By Robert Rosenhouse

Lazer Blazer take up 12 Spaces. 12 x 6 = 72

Now divide by 2 gives you 36 so CX = -36

By Robert Rosenhouse take up 20 Spaces 20 x 6 = 120

Now divide by 2 gives you 60 so CX = -60

Use this for the First Program on P. 100

How about that?

Yours Truly

Terry Lawrence
